CEPI Annual Statistics 2016

European Pulp and Paper Industry

Introduction

Welcome to the latest issue of CEPI's Annual Statistics, covering data for 2016.

CEPI was founded in 1992 and annual statistics cover the period 1991 – 2016. CEPI represents 92% of the pean* pulp and paper industry in terms of production.

The Confederation of European Paper Industries (CEPI) is a Brussels-based non-profit me European pulp and paper industry towards the European Institutions. Through its approximately 495 pulp, paper and board producing corporations across Europe, ramultinationals (counting companies with a presence in more than one CEPI count represents the lso represents enterprises, to

* Europe minus Russian Federation.

Members of CEPI in 2016

The National Associations of the 18 following courthe Netherlands, Norway, Poland, Portugal, B

Sublic, Finland, France, Germany, Hungary, Italy, weden, United Kingdom.

Data Collection

This report mainly aggres complemented by data oth paper industry organisations

dntarily provided by CEPI member National Associations and, where it is , the sources are clearly stated (in most cases this is Eurostat and other foreign

The data result from the answer questionnaires sent by CEPI to its members. The national associations supply the data, which they collect from their member mes/companies plus official sources where appropriate.

Notes and definitions related to the terms and sources used in this report can be found on pages 83 to 95.

Data Quality

Responsibility for the collection and the management of the statistical data lies with the CEPI statistics department, which is constantly working to improve the quality of the data reported. In order to further increase the reliability and credibility of the data reported, CEPI has commissioned Deloitte to issue a limited assurance statement on the data quality rating that CEPI carried out on its core indicators in the statistics report. The detailed data quality rating and the limited assurance statement will be available soon on http://www.cepi.org/members/statistics/annual-statistics

Definitions

More information and details related to the definitions and descriptions of terms and categories used in the European Pul and Paper Industry can be found in the CEPI booklet "Pulp and Paper Industry - Definitions and Concepts".

¹ 495 groups or corporations in 2015, when considering the entities established in one or several countries that are not bound together by legal and/or financial links.

² 2015 and 2016 figures are based on members' data, Eurostat and estimates for some countries.

³ Total Pulp = Market Pulp + Integrated Pulp

⁴ Total Deliveries are greater than production due to the use of difference sources and to transit in big harbors.

 $^{^{\}rm 5}\,{\rm Europe}$ means EU-28 countries plus Norway and Switzerland.

⁶ Hungary, Romania and Slovenia are not included in Energy data, except for CO₂ emissions.

⁷ CHP: combined heat and power (compared to total on-site electricity generation).

⁸ CEPI Apparent Consumption = production - exports to outside CEPI + imports from outside CEPI

¹ Utilisation by sector: total use of paper for recycling in a sector as % of the total paper for recycling used by the industry

CEPI Utilisation of Paper for Recycling by Sector in 2016

For instance: case materials represent 30% of total paper and board production, have an utilisation rate of 94% and use 54.5% of total paper for recycling volumes used by the industry.

Important Note: Paper for recycling is composed of fibres but also unusable materials - non-paper components as well as paper and board detrimental to production. The share of unusable materials depends on the actual sorting and collection of used paper. It varies according to grades of paper for recycling and countries. The volume of recycled fibres actually used to produce new paper is therefore lower than the volume of paper for recycling considered. The utilisation rate compares utilisation of paper for recycling to paper & board production.

² Utilisation rate: use of paper for recycling in a sector as % of total paper & board production in that sector (See note below)

Utilisation, Net Trade and Recycling Rate¹ of Paper for Recycling in Europe²

¹ Recycling Rate = "Utilisation of Paper for Recycling + Net Trade of Paper for Recycling ", compared to Paper & Board Consumption

CEPI Utilisation and Collection of Paper for Recycling

² Europe means EU-28 countries plus Norway and Switzerland

CEPI in Focus

Fibre Flow Chart for CEPI Countries in 2016

Note: Some figures are estimates.

¹ The non-paper usages include products such as absorbent and hygienic personal products made of fluff pulp.

² The difference between recovered paper collection and recovered paper utilisation can be explained by trade, stock variations and some volumes destined to other material recycling options.

³ The trade of converted products and as well as the trade of packaging surrounding traded goods (including manuals) has been estimated to be in balance.

⁴ To the amount of non-collectable paper & board have to be added the paper & board that are non-recyclable and which go to landfills and other recovery options. In total, based on the 2013 PTS/Intecus study, it is estimated that around 22% of the total paper & board volume put on the markets are non-collectable and non-recyclable.

⁵ The actual volumes of paper & board going to landfills / final disposal and to other recovery options have been estimated with a consultant.

⁶ Returns unsold and recovered paper volumes from converters and printers should be taken into account when considering the "trade & industry" channel globally.

⁷ Around 75% of these volumes go to the construction and building sector according to a recent study. The remaining 25% go to other industries and activities such as the packaging industry and farming.

Recycling Rate⁴, Utilisation Rate and Utilisation of Paper for Recycling in 2016

Recycling Rate⁴

Utilisation Rate

Bubble size is proportional to Paper for Recycling Utilisation

¹Hungary: PFR utilisation by grade has been estimated by CEPI

² Norway: The recycling rate is above 100% due to a drop in paper & board consumption in 2016. It can also be explained by the recycling of packaging of imported goods and net import of converted paper products, not included in the apparent consumption of paper & board

³ Total Europe means EU-28 countries plus Norway and Switzerland

⁴ Recycling Rate: "Utilisation of Paper for Recycling + Net Trade", compared to Paper & Board Consumption

Utilisation of Paper for Recycling in 2016

Collection of Paper for Recycling in 2016

Rates of Paper for Recycling by Country in 2016

 $Recycling\ Rate: "Utilisation\ of\ Paper\ for\ Recycling + Net\ Trade\ "\ ,\ compared\ to\ Paper\ \&\ Board\ Consumption$

Key Figures on Paper and Board and Paper for Recycling in 2016

France: Domestic Deliveries and total deliveries have been estimated by CEPI.

General Notes

Unless another source is indicated, all the figures are taken from returns to CEPI by member associations.

In view of problems in the official 2016 intra-EU statistics, where these are known to be deficient and respondents could provide more truly representative data, they were asked to do so.

The term "paper" covers paper and board of all grammages.

Where figures are not available "n.a." is indicated.

Some totals may not add up due to rounding.

In many cases, 2015 figures have been revised and therefore differ from those reported in the previous edition.

Graphs

All graphs represent total CEPI unless otherwise indicated.

Because of small percentages represented some pie charts may not add up to 100%.

Please note that for clearer representation purposes, for some graphs the vertical axis does not start at zero.

Definitions

More information and details related to the definitions and descriptions of terms and categories used in the European Paper Industry can be found in the new CEPI booklet "Pulp and Paper Industry - Definitions and Concepts".

http://www.cepi.org/topics/statistics

Gross Domestic Product

A measure of economic activity, namely the value of an economy's total output of goods and services, less intermediate consumption, plus net taxes on products and imports, in a specified period. GDP can be broken down by output, expenditure or income components. The main expenditure aggregates that make up GDP are household final consumption, government final consumption, gross fixed capital formation, changes in inventories, and imports and exports of goods and services (including intra-eu trade). (Source: European Central Bank)

Gross Domestic Product at Market Prices

GDP at market prices is the sum of the gross values added of all resident producers at market prices, plus taxes less subsidies on imports. (Source: Eurostat)

Industrial Production

As specified in the Regulation on short-term statistics (STS-R), and in line with traditional practice in business statistics, the production index should show the evolution of value added at factor cost, at constant prices. Value added at factor cost can be calculated from turnover (excluding VAT), plus capitalised production, plus other operating income, plus or minus the changes in stocks, minus the purchases of goods and services, minus other taxes on products and taxes linked to production (Source: Eurostat)

Private Final Consumption Expenditure

Final consumption expenditure consists of expenditure incurred by resident institutional units on goods or services that are used for the direct satisfaction of individual needs or wants or the collective needs of members of the community. The final consumption expenditure may take place on the domestic territory or abroad (ESA 1995, 3.75). Private final consumption expenditure includes households' and Non Profit Institutions Serving Households (NPISH's) final consumption expenditure. Data are calculated as chain-linked volumes (i.e. data at previous year's prices, linked over the years via appropriate growth rates). Growth rates with respect to the previous quarter (Q/Q-1) are calculated from calendar and seasonally adjusted figures while growth rates with respect to the same quarter of the previous year (Q/Q-4) are calculated from raw data. (Source: Eurostat)

Retail Trade Turnover

The Retail Trade Index is a business cycle indicator which shows the monthly activity of the retail sector in value and volume. It is a short-term indicator for final domestic demand. It should be noted that the volume of sales is different from the volume of (retail) trade services. The latter takes account of changes in the quality of the trade service supplied. As such the volume of sales is conceptually different from the index of production which takes account of quality changes. Data are compiled according to the Statistical classification of economic activities in the European Community, (NACE Rev.2, Eurostat). Turnover for retail trade are compiled as a "fixed base year Laspeyres type volume-index". The current base year is 2005 (Index 2005=100). The index is presented in calendar and seasonally adjusted form. Growth rates with respect to the previous month (M/M-1) are calculated from calendar and seasonally adjusted figures while growth rates with respect to the same month of the previous year (M/M-12) are calculated from calendar adjusted figures. (Source: Eurostat)

Added Value

Added value at factor cost is the gross income from operating activities after adjusting for operating subsidies and indirect taxes. It can be calculated from turnover, plus capitalised production, plus other operating income, plus or minus the changes in stocks, minus the purchases of goods and services, minus other taxes on products which are linked to turnover but not deductible, minus the duties and taxes linked to production. Alternatively it can be calculated from gross operating surplus by adding personnel costs. Income and expenditure classified as financial or extra-ordinary in company accounts is excluded from value added. Value added at factor costs is calculated "gross" as value adjustments (such as depreciation) are not subtracted. (Source: Eurostat)

Turnover

Turnover comprises the totals invoiced by the observation unit during the reference period, and this corresponds to market sales of goods or services supplied to third parties. Turnover includes all duties and taxes on the goods or services invoiced by the unit with the exception of the VAT invoiced by the unit vis-à-vis its customer and other similar deductible taxes directly linked to turnover. It also includes all other charges (transport, packaging, etc.) passed on to the customer, even if these charges are listed separately in the invoice. Reduction in prices, rebates and discounts as well as the value of returned packing must be deducted. Income classified as other operating income, financial income and extra-ordinary income in company accounts is excluded from turnover. Operating subsidies received from public authorities or the institutions of the European Union are also excluded. (Source: Eurostat).

Group or Corporation

Association of companies located in one or several EU countries and bound together by legal and/or financial links. A group of companies can have more than one decision-making centre, especially for policy on production, sales and profit. It may centralise certain aspects of financial management and taxation. It constitutes an economic entity which is empowered to make choices, particularly concerning the units which it comprises.

Companies

Pulp and paper manufacturing companies or firms formed in accordance with the law of a CEPI member country. Company means a separate legal unit (limited, GmbH, S.A., AB. A/S, etc.) even if it is part of a bigger group, holding, etc.

The figure for the number of pulp and papermaking companies in all CEPI countries is an aggregate of all the companies from each individual country. If those companies with operations in more than one country are only counted once then it is estimated that the number of companies operating in the pulp and papermaking industry in CEPI countries is approximately 505 (Group or Corporation).

Number of Mills (Pulp and Paper)

The number of mills producing pulp and/or paper as recorded by CEPI member associations as being in production during the year concerned (includes mills which have ceased/commenced production during the year).

Number of Paper Machines

The number of machines producing paper as recorded by CEPI member associations as being in production during the year concerned (includes machines which have ceased/commenced production during the year).

Capacity

Practical maximum capacity is the tonnage of paper, paperboard or pulp of normal commercial quality that could be produced per year with full use of equipment and adequate supplies of raw materials and labour, and assuming full demand. No allowance is made for losses due to unscheduled shut downs, strikes, temporary lack of power, etc., which cause decreases in actual production, but not in production capacity. Capacity of paper machines that produce more than one grade is apportioned in accordance with actual production patterns or plans for future operation.

Capacity is reported in metric tons of net finished paper and paperboard, and air-dry (10 percent moisture content) pulp. (Source: FAO)

Average size of mills (Pulp or Paper)

Total production divided by the total number of mills.

Operating Rate (Pulp or Paper)

The amount of pulp or paper produced annually compared to the amount of capacity available to produce pulp or paper.

Employment

The number of employees concerned with the manufacture of pulp and/or paper as recorded by CEPI member associations at a specific point during the year concerned. Includes all full-time and part-time employees in what might be classed as blue-collar and white-collar occupations. Employment figures reported in CEPI annual statistics don't include employees in converting operations. However, employees of integrated converting operations (within the producing mill) and those of headquarters are included.

Investments

Investments made during the reference period in all tangible goods. Included are new and existing tangible capital goods, whether bought from third parties or produced for own use (i.e. Capitalised production of tangible capital goods), having a useful life of more than one year including non-produced tangible goods such as land. The threshold for the useful life of a good that can be capitalised may be increased according to company accounting practices where these practices require a greater expected useful life than the 1 year threshold indicated above. All investments are valued prior to (i.e. gross of) value adjustments, and before the deduction of income from disposals. Purchased goods are valued at purchase price, i.e. transport and installation charges, fees, taxes and other costs of ownership transfer are included. Own produced tangible goods are valued at production cost. Goods acquired through restructurations (such as mergers, take-overs, break-ups, split-off) are excluded. Purchases of small tools which are not capitalised are included under current expenditure. Also included are all additions, alterations, improvements and renovations which prolong the service life or increase the productive capacity of capital goods. (Source: Eurostat)

Wood

Wood Consumption

The wood used for pulp and paper manufacturing is mainly constituted of the following assortments: pulpwood (roundwood other than sawlogs, from silvicultural measures such as thinning or final felling), chips and residues from sawmills. The utilisation of sawlogs is very limited and sawdust volumes consumed are negligible. The relative shares of softwood and hardwood used depend on the country considered and the pulp and paper grades produced. The main softwood species used are pine and spruce. The main hardwood species used are birch, eucalyptus, beech and aspen. Oak is hardly used.

The wood consumption figures reported by the pulp and paper companies and included in the CEPI statistics are the volumes of wood at the mill gates and come from domestic supply or imports.

Roundwood

Logs and branches

Chips

Logs and branches which have been processed into chips (particles of wood).

Hardwood

The wood from non-coniferous (broadleaved) trees (trees that do not have needles or cones).

Softwood

The wood from coniferous trees.

Wood - Solid Under Bark

The volume of wood excluding the bark

Pulp

This report includes statistics on pulp production, trade and consumption within the CEPI countries. The report shows figures for total pulp production, i.e. both integrated pulp and market pulp. However, market pulp production and deliveries are shown separately.

Integrated Pulp Production

Integrated pulp is produced for use as raw material in the production of paper at the same mill, or for shipment by a producing mill to other mills, which it owns, controls or with which it is affiliated within the same country and therefore not sold on the open market.

Market Pulp Production

Pulp for sale in the open market and does not include pulp used in own plant or shipped to wholly owned or associated companies within the country. All pulp moving outside the producing country is considered to be market pulp.

Pulp Internal Deliveries

Integrated Production + Domestic Deliveries + Internal Trade within CEPI

Pulp Total Deliveries

Integrated Production + Domestic Deliveries + Exports

Pulp Consumption

Production + Imports from other CEPI Countries + Imports from outside CEPI - Exports to other CEPI Countries - Exports to outside CEPI

Pulp Grades

Pulp grades are classified according to their production process.

The main grades are:

Mechanical Pulps

Stone groundwood: pulp produced by grinding wood into relatively short fibres. This pulp is used mainly in newsprint and wood-containing papers, like LWC (light-weight coated) and SC papers. CEPI Harmonised Code is 923 000 000.

Thermo-mechanical (TMP): pulp produced in a thermo-mechanical process where wood particles are softened by steam before entering a pressurised refiner. TMP has mainly the same end-uses as stone groundwood. Variants of the above two processes produce pressurised stone groundwood pulp and refiner mechanical pulp. CEPI Harmonised Code is 923 400 000.

Pulp

Semi-Chemical Pulps

Semi-chemical: pulp produced in a two-stage process which involves partial digestion with chemicals, followed by mechanical treatment in a disc refiner. This pulp is mainly used in the production of fluting medium for corrugated board. CEPI Harmonised Code is 921 000 000.

Chemi-thermomechanical (CTMP): pulp produced in a similar way to TMP, but the wood particles are chemically treated before entering the refiner. This pulp has properties suited to tissue manufacture. Some CTMP is used in printing and writing grades. CTMP is classified under semi-chemical pulps in the Harmonised System of the Customs Co-operation Council. In the FAO, as well as in other industry statistics, such chemi-thermomechanical pulps are grouped with mechanical pulp.

Chemical Pulps

Sulphite: pulp produced by cooking wood chips in a pressure vessel in the presence of bisulphite liquor. End-uses range from newsprint, printing and writing papers, tissue and sanitary papers. Sulphite can be either bleached or unbleached. CEPI Harmonised Code is 922 200 000.

Sulphate (or kraft): pulp produced by cooking wood chips in pressure vessels in the presence of a sodium hydroxide (soda) liquor. The pulp may be unbleached or bleached. End-uses are widespread, with bleached pulp particularly used for graphic papers, tissue and carton boards. Unbleached pulp is commonly used in liner for corrugated board, wrappings, sack and bag papers, envelopes and other unbleached speciality papers. CEPI Harmonised Code is 922 100 000.

Other Pulps

Pulp produced from fibres other than wood, such as sugar cane bagasse, wheat straw, kenaf, cotton rags and hemp.

Deinked Pulps

Pulp made from recovered paper from which inks and other contaminants have been removed.

Non-Fibrous Materials

Non-cellulose items added to the paper stock during the papermaking process in order to impart special characteristics to the final product, such as rosins, dyes, fillers, chemicals, starches, additives, brighteners, etc. Non-fibrous materials include functional chemicals and coating chemicals. The main types of materials used can be mainly grouped by purpose:

Materials for sizing (both internal and surface sizing)

These are used in papermaking to control the absorbency of paper with regards to liquids such as water or ink. Rosin, alum, starch and gelatine are the most commonly used materials for this purpose.

Materials for loading and filling

These are used to improve the optical and physical properties of the final product such as opacity, brightness, smoothness, and ink receptivity. Filler materials include china clay (kaolin - used by papermakers to obtain finish and consistency and also for coating art and chromo paper), calcium carbonate, barium sulphate (barites), talc, and titanium dioxide.

Materials for colouring

Pigments and dyestuffs used to impart colour to the paper and usually added to the pulp whilst in the beater.

Additives used to impart special paper characteristics

In particular the use of starch as a binder to increase the strength of the final paper.

Energy

Total Primary Energy Consumption

Use of the primary energy source that has not been subjected to any conversion or transformation process. It is the use of energy contained in raw fuels, and other forms of energy received as input to a system. Primary energy can be non-renewable or renewable.

Specific Primary Energy Consumption

Primary energy use calculated per quantity of the final output (paper & board + market pulp).

Notes and Definitions

Energy

Specific CO2 Emissions

CO2 emissions remitted for the productions of specific quantity of the final output (paper & board + market pulp).

Total Electricity Produced on Site

Electrical energy produced on the mill site from different primary sources such as: hidro power, steam boilers, CHPs, recovery boilers, etc.

Purchased Electricity

Electrical energy bought from the public grid and used for production on site

Sold Electricity

Net electrical energy produced on side and send (sold) to the public grid network

CHP - Combined heat and power installation

CHP represents simultaneous production of heat sand electrical energy from one fuel source more which is far more efficient than normal fuel burning.

Environment

Specific Emissions to Water

Emissions calculated per quantity of the final output (paper & board + market pulp).

BOD – Biochemical Oxygen Demand

Indicator of the oxygenation status of water bodies. BOD is the amount of oxygen used for biochemical oxidation by a unit volume of water at a given temperature and for a given time, i.e. the amount of dissolved oxygen necessary to satisfy metabolic requirements of microorganisms which utilize the waste as food in water.

COD - Chemical Oxygen Demand

Quantity of oxygen used in biological and non-biological oxidation of materials in water. COD is a measure of water quality important in assessing the strength of an industrial waste where the liquid waste may be toxic or resistant to biological oxidation.

AOX

Organic halogens subject to absorption is a measure of the amount of chlorine (and other halogens) combined with organic compounds.

Water intake (million cubic meters per year)

The amount of freshwater abstracted by source and any other water received at the mill and the amount of water content in purchased materials and products for the purpose of pulp and paper production.

Water outflow (million cubic meters per year)

The amount of wastewater discharged from mill site to final destination.

Water consumption (million cubic meters per year)

Water lost during manufacturing plus water in sold products and water in waste – i.e. "the portion of the water that is removed from a water source that is not immediately returned to the water source".

Specific Emissions to Air

Emissions calculated per quantity of the final output (paper & board + market pulp).

NOx

Nitrogen oxides including nitric oxide (NO) and nitrogen dioxide (NO2)

SO₂

Sulphur dioxide

Paper for Recycling

To clarify the intended use of collected paper for recycling in paper mills, it has been decided to substitute the term "recovered paper" by "paper for recycling".

Utilisation

Use of paper for recycling as raw material.

Volumes entering the mill gates. Mill broke are not included.

Recovery

Principle of waste management policy including reuse, material recycling, composting and energy recovery as well as exports for similar purposes.

Recycling

Reprocessing of used paper in a production process into new paper and board.

See also the Waste Directive 2008/98/EC

Collection

Separate collection of paper and paper products from industrial and commercial outlets, from households and offices for recovery. (Collection includes transport to the sorting or recycling plant/paper mill.)

Collection = utilisation plus exports minus imports of paper for recycling.

Utilisation Rate

Percentage of paper for recycling utilisation compared to the total paper production.

Important Note: Paper for recycling is composed of fibres but also unusable materials - non-paper components as well as paper and board detrimental to production. The share of unusable materials depends on the actual sorting and collection of used paper. It varies according to recovered paper grades and countries. The volume of recycled fibres actually used to produce new paper is therefore lower than the volume of recovered paper considered. The utilisation rate compares paper for recycling utilisation to paper production.

Recycling Rate

Percentage of paper for recycling "utilisation + net trade" compared to total paper & board consumption.

Utilisation by Sector

Total utilisation of paper for recycling in a paper & board production sector as percentage of the overall paper for recycling utilisation. The paper & board production sectors are newsprint, other graphic grades, case materials, cartonboard, wrapping, other paper and board for packaging and special papers.

Paper for Recycling Classes

Class I - Mixed Grades

Waste and scrap of paper or paperboard, including unsorted waste and scrap.

Class II - Corrugated and Kraft

Unbleached kraft paper or paperboard or corrugated paper or paperboard.

Class III - Newspapers and Magazines

Paper or paperboard made mainly of mechanical pulp (for example, newspapers, journals and similar printed matter). Including old and unsold newspapers and magazines, telephone directories, brochures and printed advertising material.

Class IV - Other Grades

Other paper or paperboard made mainly of bleached chemical pulp, not coloured in the mass.

Paper & Board

Paper & Board Consumption

Production + Imports from other CEPI Countries + Imports from outside CEPI - Exports to other CEPI Countries - Exports to outside CEPI

Paper & Board Internal Deliveries

Domestic Deliveries + Internal Trade within CEPI

Per Capita Consumption

Per capita consumption of paper and board here is a calculation taking the amount of paper and board consumed in each country (for this report the amount of paper and board delivered domestically by paper manufacturers plus imports) divided by the number of the population in that country. It cannot be assumed to be the average amount of finished paper and board or articles of paper and board used by an individual. Consumption by companies, and more broadly the whole economy, is included.

Paper & Board Grades

Graphic Papers

Newsprint: paper mainly used for printing newspapers. It is made largely from mechanical pulp and/or recovered paper, with or without a small amount of filler. Weights usually range from 40 to 52g/m² but can be as high as 65g/m². Newsprint is machine-finished or slightly calendered, white or slightly coloured and is used in reels for letterpress, offset or flexo-printing. The CEPI Harmonised Code for Newsprint is 100 000 000.

Uncoated Mechanical: paper suitable for printing or other graphic purposes where less than 90% of the fibre furnish consists of chemical pulp fibres. This grade is also known as groundwood or wood-containing paper and magazine paper, such as heavily filled super-calendered paper for consumer magazines printed by the rotogravure and offset methods.

The CEPI Harmonised Code for Uncoated Mechanical is 211 000 000.

Uncoated Woodfree: paper suitable for printing or other graphic purposes, where at least 90% of the fibre furnish consists of chemical pulp fibres. Uncoated woodfree paper can be made from a variety of furnishes, with variable levels of mineral filler and a range of finishing processes such as sizing, calendering, machine-glazing and watermarking. This grade includes most office papers, such as business forms, copier, computer, stationery and book papers. Pigmented and size press "coated" papers (coating less than 5g per side) are covered by this heading. The CEPI Harmonised Code for Uncoated Woodfree is 231 000 000.

Coated Papers: all paper suitable for printing or other graphic purposes and coated on one or both sides with minerals such as china clay (kaolin), calcium carbonate, etc. Coating may be by a variety of methods, both on-machine and off-machine, and may be supplemented by super-calendering. Coated Mechanical papers are made of fibres produced mainly (90%) by a mechanical pulping process and are also known as coated groundwood. Coated Woodfree papers are made of fibres produced mainly (90%) by a chemical pulping process and are also known as coated freesheet.

The CEPI Harmonised Code for Coated Mechanical is 212 000 000 and for Coated Woodfree is 232 000 000.

Sanitary and Household

This covers a wide range of tissue and other hygienic papers for use in households or commercial and industrial premises. Examples are toilet paper and facial tissues, kitchen towels, hand towels and industrial wipes. Some tissue is also used in the manufacture of baby nappies, sanitary towels, etc. The parent reel stock is made from virgin pulp or recovered fibre or mixtures of these. It is reported in the production statistics at parent reel weight before conversion to finished products. Import and export statistics however take into account trade in both parent reels and finished products.

The CEPI Harmonised Code for Sanitary and Household is 700 000 000.

Packaging Papers

Case Materials: papers and boards mainly used in the manufacture of corrugated board. They are made from any combination of virgin and recovered fibres and can be bleached, unbleached or mottled. Fluting is the middle ply with outer layers called the liners. Included are kraftliner, testliner, semi-chemical fluting, and recovered paper-based fluting (Wellenstoff). Main uses include corrugated boxes, transport packaging, storage and product display. Also known as containerboard, corrugated case materials, cardboard, linerboard or corrugating medium. The CEPI Harmonised Code for Case Materials is 300 000 000.

CEPI Annual Statistics 2016

Notes and Definitions

Paper and Board

Cartonboard (can also be written as Carton Board): may be single or multiply, coated or uncoated. It is made from virgin and/or recovered fibres, and has good folding properties, stiffness and scoring ability. It is mainly used in cartons for consumer products such as frozen food, cosmetics and for liquid containers. Also known as solid board, folding box board, boxboard or carrier board. The CEPI Harmonised Code for Cartonboard is 400 000 000.

Wrappings (up to 150 g/m²): papers whose main use is wrapping or packaging made from any combination of virgin or recovered fibres, bleached or unbleached. They may be subject to various finishing and/or marking processes. Included are sack kraft, other wrapping krafts, sulphite and grease-proof papers. The CEPI Harmonised Code for Wrappings is 500 000 000.

Other Paper & Board for Packcaging: this category embraces all paper and board mainly for packaging purposes other than those listed above. Most are produced from recovered fibres, e.g. greyboards, and go for conversion, which in some cases may be for end-uses other than packaging including book covers and games. Also known as greyboard or unlined chip.

The CEPI Harmonised Code for Other Packaging is 600 000 000.

Other Paper and Board

Other paper and board for industrial and special purposes: This wide ranging category includes cigarette papers and filter papers, as well as gypsum liners and special papers for waxing, insulating, roofing, asphalting, and other specific applications or treatments. The CEPI Harmonised Code for Special Paper and Board is 800 000 000.

CEPI Harmonised Codes

More information about the CEPI Harmonised Code Structure and CEPI Harmonised Grade List is available on the CEPI website (www.cepi.org)

Groups of Paper for Recycling Grades

According to the EN 643 "European List of Standard Grades of Paper for Recycling and Board", the following is the official paper for recycling grade listing:

 $\text{Mixed Grades: } 1.01.00, \ 1.02.00, \ 1.03.00, \ 5.01.00, \ 5.02.00, \ 5.03.00, \ 5.03.01, \ 5.05.00, \ 5.05.01, \ 5.05.02, \ 5.11.00 \\$

Corrugated and Kraft: 1.04.00, 1.04.01, 1.04.02, 1.05.00, 1.05.01, 4.01.00, 4.01.01, 4.02.00, 4.03.00, 4.04.00, 4.05.00, 4.06.00, 4.07.00, 4.08.00, 5.04.00, 5.08.00, 5.12.01, 5.13.00, 5.13.01

Newspapers and Magazines: 1.06.00, 1.06.01, 1.06.02, 1.07.00, 1.09.00, 1.11.00, 2.01.00, 2.02.00, 2.02.01

Other Grades: 2.03.00, 2.03.01, 2.04.00, 2.04.01, 2.05.00, 2.05.01, 2.06.00, 2.06.01, 2.07.00, 2.07.01, 2.08.00, 2.10.00, 2.11.00, 2.12.00, 2.13.00, 2.14.01, 3.01.00, 3.02.00, 3.03.00, 3.03.01, 3.04.00, 3.05.01, 3.05.01, 3.06.00, 3.08.00, 3.09.00, 3.10.00, 3.10.01,

3.11.00, 3.11.01, 3.12.00, 3.13.00, 3.14.00, 3.15.00, 3.15.01, 3.16.00, 3.16.01, 3.17.00, 3.18.00, 3.18.01, 3.18.02, 3.19.00, 3.20.00,

3.20.01, 5.05.03, 5.06.00, 5.06.01, 5.07.00, 5.07.01, 5.09.00, 5.10.00, 5.10.01, 5.14.00, 5.14.01

European Classifications

Pulp and Paper Industry Activities are classified under these NACE 2 Headings:

C17 Manufacture of paper and paper products

C17.1 Manufacture of pulp, paper and paperboard

C17.1.1 Manufacture of pulp

C17.1.2 Manufacture of paper and paperboard

C17.2 Manufacture of articles of paper and paperboard

C17.2.1 Manufacture of corrugated paper and paperboard and of containers of paper and paperboard

C17.2.2 Manufacture of household and sanitary goods and of toilet requisites

C17.2.3 Manufacture of paper stationery

C17.2.4 Manufacture of wallpaper

C17.2.9 Manufacture of other articles of paper and paperboard

In general data reported to CEPI would be classified under:

C17 Manufacture of paper and paper products

C17.1 Manufacture of pulp, paper and paperboard

C17.1.1 Manufacture of pulp

C17.1.2 Manufacture of paper and paperboard

External Trade activities

External Trade activities relating to the pulp and paper industries are classified under Chapters 47 and 48 of the Combined Nomenclature. For further details of the Combined Nomenclature see:

http://ec.europa.eu/taxation_customs/customs/customs_duties/tariff_aspects/combined_nomenclature/index_en.htm

CEPI uses the following Geonomenclature for its statistics

Europe

CEPI Countries

Austria, Belgium, Czech Republic, Finland, France, Germany, Hungary, Italy, The Netherlands, Norway, Poland, Portugal, Romania, Slovak Republic, Slovenia, Spain, Sweden, United Kingdom.

Other Europe than CEPI Countries

Albania, Andorra, Belarus, Bosnia-Herzegovina, Bulgaria, Croatia, Cyprus, Denmark, Estonia, Faeroe Islands, Gibraltar, Greece, Iceland, Ireland, Isle of Man, Kosovo, Latvia, Liechtenstein, Lithuania, Luxembourg, Macedonia, Malta, Moldova (Republic of), Monaco, Montenegro, Russian Federation, San Marino, Serbia, Svalbard & Jan Mayen Islands, Switzerland, Turkey, Ukraine, Vatican City State.

EU-28 Countries

Austria, Belgium, Bulgaria, Croatia Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, The Netherlands, Poland, Portugal, Romania, Slovak Republic, Slovenia, Spain, Sweden, United Kingdom.

Africa

Algeria, Angola, Benin, Botswana, British Indian Ocean Territory, Burkina Faso, Burundi, Cameroon, Cape Verde, Central African Republic, Ceuta, Chad, Comoros, Congo, Congo (Democratic Republic), Cote d'Ivoire, Djibouti, Egypt, Equatorial Guinea, Africa, Eritrea, Ethiopia, Gabon, Gambia, Ghana, Guinea, Guinea-Bissau, Kenya, Lesotho, Liberia, Libyan Arab Jamahiriya, Madagascar, Malawi, Mali, Mauritania, Mauritius, Mayotte, Melilla, Morocco, Mozambique, Namibia, Niger, Nigeria, Reunion, Rwanda, Saint Helena, Sao Tome and Principe, Senegal, Seychelles, Sierra Leone, Somalia, South Africa, Sudan, Swaziland, Tanzania, Togo, Tunisia, Uganda, Western Sahara, Zambia, Zimbabwe.

Asia

Afghanistan, Armenia, Azerbaijan, Bahrain, Bangladesh, Bhutan, Brunei, Darussalam, Cambodia, China, Georgia, Hong Kong, India, Indonesia, Iran, Iraq, Israel, Japan, Jordan, Kazakhstan, Korea (Democratic People's Republic of), Korea (Republic of(S)), Kuwait, Kyrgyzstan, Lao People's Democratic Republic, Lebanon, Macao, Malaysia, Maldives, Mongolia, Myanmar, Nepal, Oman, Pakistan, Philippines, Qatar, Saudi Arabia, Singapore, Sri Lanka, Syrian Arab Republic, Taiwan, Tajikistan, Thailand, Timor Leste, Turkmenistan, United Arab Emirates, Uzbekistan, Viet Nam, West bank /Gaza, Yemen.

Latin America
