PAPAIRWRAP - THE BUBBLEWRAP MADE OF PAPER

As a start-up, we develop innovative technologies for the production of sustainable packaging materials. The first of these technologies enables the production of "PapairWrap", a bubble wrap made exclusively from paper. PapairWrap combines sustainability, reliable cushioning properties and cost efficiency like no other packaging material. It is a sustainable alternative to conventional packaging materials and can be used for almost all products that are packed and shipped.

Our production site is in Rethem an der Aller, because we value local production. We have been producing bubble wrap made of paper in-house since June 2023.
