ENGINEERED PAPER FOR STERILE MEDICAL DEVICES

Patient safety is at the heart of the paper technologies developed to pack sterile medical devices. Sterile medical devices come in many different forms, shapes and weight but they still must be sterilised, kept sterile over time, protected and in perfect condition for aseptic usage by healthcare professionals. This brings

many challenges to the paper which must be both robust and flexible, breathable to allow sterilisation processes and resistant to moist. It must seal to plastic films and be opened without releasing particles or fibres so that no residue can put the patient's health at risk.
