HOLMEN ELEVATE

Holmen AB | Sweden

Henric Dernegård | henric.dernegard@holmen.com

Produce containerboard with low grammage from TMP-pulp. Holmen Elevate is a lightweight containerboard designed to combine low grammage with the strength properties required for its targeted packaging applications. Its reduced material weight enables higher packaging production per tonne of board, while also contributing to lower transportation costs and associated emissions. Lighter packaging can additionally improve the working environment for people involved in its handling.

Produced from 100% virgin fibre, Holmen Elevate is approved for direct food contact without the need for additional barriers, including for fatty foods. This provides an alternative for applications where recycled paper may not be suitable for direct food contact and helps meet relevant regional food-safety requirements.
